Observations	193648	193648	193648	193648	193648	193648

DV: respondent has a birth certificate. Sample restricted to cohorts born within ten years of reform in treated or control districts.

Specifications estimated using OLS including district of birth and year of birth fixed effects and control for gender. Exposure to reform is an indicator for being born after reform in a treated district. Standard errors clustered at the district of birth-level in parentheses. * $p < 0.1$, ** $p < 0.05$, *** $p < 0.01$.

Observations	193648	193648	193648	160588	160588	193648	193648	193648

DV: respondent has a birth certificate. Panel I examines heterogeneity using local measures of taxation; Panel II using local measures of public goods. Sample restricted to cohorts born within ten years of reform in treated or control districts. District-level measures of tax levels from Jensen and Mkama (1968); tax incidence from Lee (1965); local public goods from administrative data. Regressions control for interaction of *Reform* with standardized district income per capita and population density. All specifications estimated using OLS including district of birth and year of birth fixed effects and control for gender. SEs clustered at the district of birth-level in parentheses. * $p < 0.1$, ** $p < 0.05$, *** $p < 0.01$.

Observations	5419	25417	78027	155313	252715	543094

Outcome variable is whether respondent has a birth certificate. Data source is 2012 national census. Panel A: estimated using a local linear regression in the set of treated districts. Coefficient represents the change in registration probability among cohorts just after, versus just before, the reform. Panel B: Equation (1) estimated using household-level fixed effects.

* $p < 0.1$, ** $p < 0.05$, *** $p < 0.01$. Standard errors clustered at the district of birth-level in parentheses.

Table 7: Effects on literacy (Table A8)

Outcome mean	0.13	0.08	0.15	0.14
Observations	4188733	619982	1673553	1788643

Table estimates the effects of the '66 reform, '80s reforms, and '09 reform on registration as discussed in Appendix A.2. Column (1) estimates using the complete census sample and tests for differences between the effects of later reforms compared to '66. Columns (2) to (4) separately estimate effects of each reform, restricting each sample to cohorts born close to reform year. All specifications are estimated using OLS and include district of birth and year of birth fixed effects. * $p < 0.1$, ** $p < 0.05$, *** $p < 0.01$. Standard errors clustered at the district of birth-level in parentheses.

Table A.1.4: Heterogeneity in compliance with reforms (+/- 5 cohorts)

	I. Taxation					II. Local public goods		
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
<i>Reform</i>	0.052*** (0.010)	0.048*** (0.008)	0.049*** (0.005)	0.049*** (0.007)	0.052*** (0.006)	0.055*** (0.018)	0.046*** (0.005)	0.053*** (0.012)
<i>Reform</i> × Share paying tax		-0.017** (0.008)			-0.016*** (0.005)			
<i>Reform</i> × Tax per capita			-0.048** (0.021)		-0.037*** (0.013)			
<i>Reform</i> × ($\tau^{\text{Max}} - \tau^{\text{Min}}$)				-0.016*** (0.005)	-0.007 (0.005)			
<i>Reform</i> × Primary schools						0.018 (0.025)		0.018 (0.018)
<i>Reform</i> × Secondary school							0.016*** (0.004)	0.016*** (0.005)
Outcome mean	0.12	0.12	0.12	0.13	0.13	0.12	0.12	0.12
Observations	102836	102836	102836	84987	84987	102836	102836	102836

DV: respondent has a birth certificate. Panel I examines heterogeneity using local measures of taxation; Panel II using local measures of public goods. Sample restricted to cohorts born within ten years of reform in treated or control districts. District-level measures of tax levels from Jensen and Mkama (1968); tax incidence from Lee (1965); local public goods from administrative data. Regressions control for interaction of *Reform* with standardized district income per capita and population density. All specifications estimated using OLS including district of birth and year of birth fixed effects and control for gender. SEs clustered at the district of birth-level in parentheses. * p < 0.1, ** p < 0.05, *** p < 0.01.

Table A.1.5: Complier characteristics (+/- 5 cohorts)

Variable	Sample mean (1)	Complier mean (2)	Ratio (3)
Male	0.46	0.09	0.19
Parent has primary education	0.49	0.51	1.04
Parent has secondary education	0.04	0.07	1.86
Parent has university education	0.01	0.01	1.38

Table computes covariate means for baseline NPS sample (column 1) and compliers (column 2). Column (3) is column (2) divided by column (1).

A.2 All cohorts

Regressions control for interaction of *Reform* with standardized district income per capita and population density. All specifications estimated using OLS including district of birth and year of birth fixed effects and control for gender. SEs clustered at the district of birth-level in parentheses. * p < 0.1, ** p < 0.05, *** p < 0.01.

Table B.2.5: Complier characteristics (-Heaped ages)

Variable	Sample mean (1)	Complier mean (2)	Ratio (3)
Male	0.48	0.60	1.26
Parent has primary education	0.52	0.59	1.13
Parent has secondary education	0.05	0.12	2.25
Parent has university education	0.01	0.06	3.99

Table computes covariate means for baseline NPS sample (column 1) and compliers (column 2). Column (3) is column (2) divided by column (1).

C Modifying control variables

C.1 District-level

Table C.1.1: Effect of reform on registration (District-level)

	(1)	(2)	(3)	(4)	(5)	(6)
<i>Reform</i>	0.06*** (0.00)	0.06*** (0.00)	0.05*** (0.01)	0.05*** (0.01)	0.05*** (0.01)	0.04*** (0.01)
<i>Reform</i> _{t+1}				0.02 (0.01)	0.02 (0.01)	0.01 (0.01)
<i>Reform</i> _{t+2}				-0.00 (0.02)	-0.01 (0.02)	-0.01 (0.02)
<i>Reform</i> _{t+3}				-0.00 (0.01)	-0.00 (0.01)	-0.01 (0.01)
<i>Reform</i> _{t+4}				-0.01 (0.01)	-0.01 (0.01)	-0.01 (0.01)
<i>Reform</i> _{t+5}				0.00 (0.01)	0.00 (0.01)	-0.01 (0.01)
Time trends	None	Region	District	None	Region	District
F-statistic	156.5	589.2	55.6	32.7	43.8	24.4
Outcome mean	0.13	0.13	0.13	0.13	0.13	0.13
Observations	193648	193648	193648	193648	193648	193648

DV: respondent has a birth certificate. Sample restricted to cohorts born within ten years of reform in treated or control districts.

Specifications estimated using OLS including district of birth and year of birth fixed effects and control for gender. Exposure to reform is an indicator for being born after reform in a treated district. Standard errors clustered at the district of birth-level in parentheses. * $p < 0.1$, ** $p < 0.05$, *** $p < 0.01$.

Table C.1.2: Effects on access to the state (District-level)

	I. Education			II. Social security		
	Pri. (1)	Sec. (2)	Uni. (3)	HI (4)	Priv. (5)	State (6)
Registered (β^{OLS})	0.11*** (0.01)	0.34*** (0.01)	0.10*** (0.00)	0.11*** (0.01)	0.12*** (0.00)	0.11*** (0.01)

Observations	619982	619982	619982	619982	619982	619982

DV: respondent has a birth certificate. Sample restricted to cohorts born within ten years of reform in treated or control districts.

Specifications estimated using OLS including district of birth and year of birth fixed effects and control for gender. Exposure to reform is an indicator for being born after reform in a treated district. Standard errors clustered at the district of birth-level in parentheses. * $p < 0.1$, ** $p < 0.05$, *** $p < 0.01$.

DV: respondent has a birth certificate. Panel I examines heterogeneity using local measures of taxation; Panel II using local measures of public goods. Sample restricted to cohorts born within ten years of reform in treated or control districts. District-level measures of tax levels from Jensen and Mkama (1968); tax incidence from Lee (1965); local public goods from administrative data. Regressions control for interaction of *Reform* with standardized district income per capita and population density. All specifications estimated using OLS including district of birth and year of birth fixed effects and control for gender. SEs clustered at the district of birth-level in parentheses. * p < 0.1, ** p < 0.05, *** p < 0.01.

Table D.2.5: Complier characteristics (Unrestricted)

Variable	Sample mean (1)	Complier mean (2)	Ratio (3)
Male	0.47	0.57	1.20
Parent has primary education	0.51	0.62	1.20
Parent has secondary education	0.05	0.12	2.26
Parent has university education	0.01	0.05	3.90

Table computes covariate means for baseline NPS sample (column 1) and compliers (column 2). Column (3) is column (2) divided by column (1).
